Mannabox; Cool Temperature Delivered in a Box

September 1, 2010, Atlanta, GA ---- The CCS LLC, which provides a full-scale sustainable cold chain offering, recently released a new cold cargo solution entitled, “Mannabox”. This new technology thermo module consists of a lightweight polypropylene container, cold elements, and monitoring devices. This sustainable innovation uses no outside power to operate and provides a more robust cold chain than other technologies in the market today.

The company has been providing cold cargo shipping solutions to customers in Europe for over a decade. The company is now expanding into new markets in the US and Canada, providing sellers a new technology thermo controlled packaging (TCP) system. The system will help transform business operations, for example by providing consumers a chance to buy more local, organic, premium, and prepared food.

CCS plans to expand operations in all states across the USA and Canada. One of the key targets is upper-income suburbanites and professionals, seeking to buy fresh, organic and sustainable products with delivery to their homes, schools and offices.

These customers pay a monthly fee for a weekly delivery of local organic produce, premium cuts of meat and seafood, prepared meals, and other grocery items, as well as a wide range of catered foods. Shoppers can choose from customized menus designed by nutritionists and local chefs, buy products online and then pick them up at a local supermarket, restaurant or farm, or they can pay a small fee for delivery to their homes or a place of business.

As for both suppliers and retailers, regional chains can now offer online sales and delivery service as a customer convenience. The major chains can launch national e-commerce programs to deliver the time- and cost-savings benefits of buying on-line.

With over a decade of cold cargo intelligence know-how and experience under its belt, CCS, is building a network of suppliers and retailers in key geographic locations, all on the premise that a vast group of shoppers across America will point and click their way through weekly grocery lists. Some industry experts and analysts believe that of all the grocery e-tailers now operating, the Mannabox is the best solution for a reliable cold chain solution in the market, and that CCS has a chance of success in expanding perishable product offerings, creating new business models and delivery systems in the US, and elsewhere.
